Support Information

REE in Lung Cancer

While most dietitians will have attempted to meet energy requirements based on calculated estimates, it is common for other nutrients, particularly micronutrients, to be prescribed at levels that risk deficiency or toxicity. The difficulty is processing the complex and multiple calculations to make the necessary checks.

Questions 7-9 show how FeedCalc automatically updates prescription adequacy (as % requirement, >100% being adequate) and potential toxicity (as 'Risk') so that you can assess the safety of your prescription.
